## IOT

What is IOT? DEPT OF IT

IOT is where devices are connected to the internet that can be controlled or can be used to send information. This includes devices in households, businesses, factories, farms and cities that are accessible online. These devices can include anything from smart speakers, cell phones, headphones, wearables, garden systems, meters and cameras.

### 4 Stages of Architecture

1. Device
2. Network
3. Data
4. Application
